Priority Applications (No Type Date): DE 2804801 A 19780204

Abstract (Basic): DE 2804801 A

The rubber-cloth washing equipment is for offset printing presses, having a washing cloth brought into contact with the rubber cylinder to be cleaned, and to which washing fluid is delivered. The equipment moistening the cloth (4) with washing fluid has a porous strip (12) of sintered material to which the fluid is delivered, and over which the cloth runs for its entire width. The strip can be accommodated in a holder (14), apart from its free contact surface (13), the holder containing fluid feed passages (16) at intervals and which are connected to a supply pipe (11).
